• **Case 1:** A 45-year-old male with a long history of alcohol abuse and chronic liver disease. He presents with a 2-week history of increasing abdominal distension and discomfort. On physical examination, there is a large, tense, fluid-filled abdomen (ascites) and a positive fluid wave test. Laboratory tests show a total bilirubin of 2.5 mg/dL, serum albumin of 2.8 g/dL, and a prothrombin time of 18 seconds. An ultrasound of the abdomen shows a large volume of free fluid in the peritoneal cavity. The patient is diagnosed with cirrhosis and ascites.
